MULTI THREADED APPLICATION

AIM: To develop a java program for implementing multithread application.

REQUIREMENTS:

Develop a java program that implements a multithread application that has 3 threads. First generates a random integer for every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.

ALGORITHM:

STEP 1: Declare a package called multithread.

STEP 2: Declare a class name of FirstThread, SecondThread which extends from Thread.

STEP 3: Declare a object in the respective classes.

STEP 4: Create a condition to check the statements.

STEP 5: Print the result.

CLASS DIAGRAM:

PROGRAM:

MainThread:

```
package multithread;
```

```
/*
```

```
 * developed by N.Guru sai babu
```

```
 * EEE-B
```

```
 * 212217105301
```

```
*/
```

```
import java.util.Random;
```

```
public class MainThread {
```

```
    public static Integer RandomValue;
```

```
    public static void main(String[] args) {
```

```
        FirstThread t1;
```

```
        SecondThread t2;
```

```
        Random r;
```

```
        t1=new FirstThread();
```

```
        t2=new SecondThread();
```

```
        r=new Random();
```

```
        RandomValue=-1;
```

```
        t1.start();
```

```
        t2.start();
```

```
        try
```

```
        {
```

```
        while(true)
```

```
        {
```

```
            synchronized(RandomValue)
```

```
            {
```

```
                if(RandomValue== -1)
```

```
                {
```

```
                    RandomValue=r.nextInt(200);
```

```
                    System.out.println("Placed a new number "+RandomValue);
```

```
                }
```

```
            }
```

```
            Thread.sleep(4000);
```

```
        }
```

```
    }catch(InterruptedException ex)
```

```
    {
```

```
        System.out.println("Error:"+ex);
```

```
    }
```

```
}
```

```
}
```

FirstThread:

```
*/  
*developed by N.Guru sai babu  
* EEE-B  
* 212217105301  
*/
```

package multithread;

public class FirstThread extends Thread {

```
    public void run()  
    {
```

```
        try  
        {
```

```
            System.out.println("First thread started...");
```

```
            while(true)
```

```
            {
```

```
                synchronized(MainThread.RandomValue)
```

```
                {
```

```
                    if(MainThread.RandomValue
```

```
%2==0&&MainThread.RandomValue!=-1)
```

```
                    {
```

```
                        System.out.println("Value is even");
```

```
                        System.out.println("Answer="+
```

```
(MainThread.RandomValue*MainThread.RandomValue));
```

```
                        MainThread.RandomValue=-1;
```

```
                    }
```

```
                }
```

```
                Thread.sleep(1000);
```

```
            }
```

```
        }catch(InterruptedException ex)
```

```
        {
```

```
            System.out.println("Error:"+ex);
```

```
        }
```

```
    }
```

```
}
```

SecondThread:

```
/*
 * developed by N.Guru sai babu
 * EEE-B
 * 212217105301
 */

package multithread;

public class SecondThread extends Thread {

    public void run()
    {
        try
        {
            System.out.println("Second thread started...");
            while(true)
            {
                synchronized(MainThread.RandomValue)
                {
                    if(MainThread.RandomValue%2!
=0&&MainThread.RandomValue!=-1)
                    {
                        System.out.println("Value is odd");
                        System.out.println("Answer="+
(MainThread.RandomValue*MainThread.RandomValue*MainThread.RandomValue));
                        MainThread.RandomValue=-1;
                    }
                }

                Thread.sleep(1000);
            }
        } catch(InterruptedException ex)
        {
            System.out.println("Error:"+ex);
        }
    }
}
```

OUTPUT:

```
First thread started...
Placed a new number 113
Value is odd
Answer=1442897
Placed a new number 106
Value is even
Answer=11236
```

RESULT: Thus a java application that performs multithreading is developed.
